

## **Zsolt László Bereczki: Security and safety in the prison system introduction**

The delinquency has been increased explosive growth from the system changing.

The most crimes trespass on the people's rights and affect their lifestyles negatively.

One of the most important thing is the prison service, which is able to protect the society .

On the one hand keeps from committing crimes, and the other hand helps to reintegrate.

Two factors, the statical and the dynamical security activities are influence on the correctional service.

In my dissertation I determine the next statements:

- I laid out the concept of the security system, and the dynamical,statical security activities
- I defined the most important problems in the correctional system
- I analyzed the operation of the prison
- I drafted international experience, which can help to reduce the expenses refer to the European Union tenders
- I demonstrated that we should emphasize the dynamical security in the Hungarian prison system, instead of developing the statical security.

Unexpected event could happen outside the prison, for example transporting, working.

The prison security system is separated exterior and interior security system.

The exterior security system means protecting the building and holding off the prison breaking.

The interior security system means keeping the order at workplace, school and the prison, as well.

It is known to not having prison breaking is due to the security system and the prisoners.

Communication is the most important thing to control the prisoners.

Getting know the prisoners and their behaviour gives the base of the dynamical security system.

One of the most important thing is to choose good and qualified staff, for example teacher, psychologist, doctor and cleric.

It is widely known: if the prisoner is not hungry and busy, there is no problem with him.

The statical security system includes the material, technical appliances and prison guards.

In my dissertation I tried to apply my experinces, which I have got to have been a prison director and researcher.
