"The prize fellowships set men free while they are still young. It is a mistake to think that maturity is necessary for discovery. Maturity is necessary for administration; for discovery genius is necessary. Great men are not always precocious, but they are perhaps never really late in development. This is true of the best men generally. Such men ought to begin to do their <sup>own</sup> work, in their own way, on their own responsibility, by the time they have reached 23-25. They ought to be encouraged to do it, and they need to be encouraged to believe they can do it. They ought to have at this age the necessary training, and given that, they ought not to be directed."

Trinity College, Cambridge,

(Rockefeller jelentésből, Groggól)

Prize Fellows are elected at some time within three years of receiving the degree of Arts. Elections take place once a year. Accordingly every man may have three chances, but after his three years have passed a competitive prize fellowship is no longer open to him. Thus the possibility is excluded of requiring a large, mature and finished piece of work as an element in the competition, and the system of routine apprenticeship cannot arise. This system of apprenticeship is well known to be the ideal method of mass production of thoroughly competent workers out of second-rate material; but it is one of the great enemies of true superiority. It may be found in highest perfection in the German university and the American graduate school."
